

Penergetic AquaKat® *Your drinking water will become spring water*

The advertisement features a central image of a water tap with water spraying out, set against a background of a lush green landscape with a waterfall. Above this, there are two side-by-side images of water filters: the left one is labeled 'without Kat' and shows a filter heavily encrusted with white lime scale, while the right one is labeled 'using Kat' and shows a clean, clear filter. To the right of these are two small images: one of a rainbow and another of a colorful, crystalline structure. The text 'penergetic' is at the top left, and 'Der Aqua-Kat' is written near the tap. Below the tap is a large image of the AquaKat device, a cylindrical stainless steel pipe with a purple 'AQUAKAT' logo. The text 'The solution for your water!' is prominently displayed, followed by a list of benefits: 'Hardness stabilisation and chalk homogenisation', 'Reduction of existing limescale layers', 'No rust or water discolouration', 'Build up of a protective layer in your water pipes', and 'More vigorous water'. At the bottom left, there is a section for 'Order Numbers' with details for three models: AquaKat - L (for 1-2 families), AquaKat - M (for apartments), and AquaKat - S (for single outlets). The contact information 'info@penergetic.com • www.penergetic.com' is at the bottom left, and a red circular logo is at the bottom right.

The solution for your water!

- Hardness stabilisation and chalk homogenisation
- Reduction of existing limescale layers
- No rust or water discolouration
- Build up of a protective layer in your water pipes
- More vigorous water

Order Numbers:

AquaKat - L Water quantity: Houses accommodating 1 - 2 families
Article No.: wa 570699

AquaKat - M Water quantity: Apartments
Article No.: wa 58799

AquaKat - S Water quantity: Single water outlets
Article No.: 59799

Areas of Application

Households
Agriculture
Industry
Filters
While travelling

General Technical Data

Material: V2A stainless brushed steel
Spashproof, maintenance free
no operating costs

What is an AquaKat®

The AquaKat® is a physical device used for the treatment and revitalisation of water

How does it work

The effect of the device is based on the principle of resonance. The AquaKat emits a frequency which in water triggers the changes described above (resonance)

The AquaKat® consists of two components:

- stainless steel body
- densely constructed core, which emits frequencies

Technical Data for Fitting

Pipework: The AquaKat® can be fitted to any type of pipework
Guarantee: 5 year guarantee on workmanship and materials

Subject to technical change without notice.
