product	use	article	package
penergetic-k	Compost & Manure	ak 300302	2 kg
penergetic-k	Compost & Manure	ak 300305	120 g

Carrier material :
Calcium-Carbonate

Application

Liquid:

Dilute 40 g penergetic-k / m³ of compost material in water, let stand, pour over compost layer by layer.

Dry:

Pre-mix 40 g penergetic-k / m³ of compost material with stone meal, sawdust, sand or similar substances ratio 1:10. Apply evenly to compost.

In compost and dung (Stacking system)

Each new layer should be treated with penergetic-k while building a compost heap. In an existing compost heap which is not going to be turned anymore, poke several holes into the heap and pour in penergetic-k. An ideal way of adding penergetic-k is during turning of the heap.

In the stable

After cleaning the stable first apply penergetic-k 3 g / m² onto the floor, then on top of bedding. Repeat after applying new bedding.

In the bio-bin

After emptying the container apply penergetic-k to the floor. Give very small amounts of penergetic-k on top of each layer. Pre-mix with sand to make application easier.
